TITLE	CHAPTER	APPROVED BY	
State Equipment		Signature	e on File
Fleet	SEF Procurement	0.9.10.10.1	

I. Purpose and Scope:

Introduction:

SEF maintains a substantial inventory of parts and supplies to support the state's fleet of equipment. In order to preserve the integrity of this inventory and to satisfy audit requirements, it is necessary to account for the value and quantity of this inventory on a regular basis. This is accomplished by taking a physical inventory (count) of all SEF parts facilities on an annual basis.

The purpose of this procedure is to establish a uniform method of conducting the SEF Physical Parts Inventory.

Responsibility/Performance:

SEF Headquarters Establish specific inventory procedures.

Oversee the physical inventory process.

SEF Parts Manager Conduct the physical inventory in accordance

with these procedures.

Reference:

Department policy DPOL 11.03.002 Repair Parts, Warehousing, Purchasing & Inventory

II. <u>Distribution</u>

All holders of the Procedure Manual; all SEF Procedure Manual holders, SEF Parts Managers, and SEF District/Regional Managers.

Physical Inventory Procedures
Effective: December 15, 1993
Page 2 of 6

III. Procedure:

A. Pre-inventory preparation

In order to achieve a successful physical inventory, certain preparations must be made. Data entry for all parts transactions (receipts, transfers, issues, adjustments, etc.) shall be completed prior to beginning the physical inventory process.

Warehouse layout regarding bin location and part identification must match the computer information for those same items in the Equipment Management System (EMS).

B. Physical count

- 1. Computerized count sheet is provided by EMS.
- Conduct actual count, row by row, bin by bin, of all SEF parts facilities.
 The physical count will be conducted simultaneously at all primary SEF parts facilities. Remote parts facilities will be counted prior to the primary physical count. SEF District/Regional Managers, or their designees, are responsible to audit the physical counting process as it occurs.
- 3. Enter data from the physical counts into EMS.
- 4. Runt he Inventory Variance Report. An EMS report is generated which shows the variance between the computer on hand quantities and the physical count quantities.
- 5. Report of Variance. A report that shows the variance by item level and parts facility, between original EMS quantity and actual physical count. At this point, any appropriate adjustments to the physical count as a result of faulty inventory procedures and/or mistakes, will be made.
- 6. A final Report of Variance will be run to show actual overages or underages in the inventory as revealed by the physical count.

C. Inventory reconciliation

Run the EMS Function Adjust to Physical Inventory, a report that adjusts
the computer inventory to match the physical count. At the end of this
process, the EMS computer quantities will exactly mirror the physical
count sheet quantities.

STATE OF ALASKA

Department of Transportation & Public Facilities
POLICY AND PROCEDURE MANUAL

Policy and Procedure 11.03.020 SEF Parts and Parts Warehouse Management Effective: April 2, 1993 Page 3 of 6

2. The book value of the statewide inventory is adjusted and reconciled to AKSAS by SEF Headquarters staff.

D. Final inventory analysis and reporting

1. A final report of the physical inventory is prepared showing the ending inventory at each parts facility, variances in the physical inventory, problems (if any) with the count process, and other information pertinent to the results of the physical inventory.

E. Parts issue during inventory

Although provisions will be made to issue essential parts from stock during the inventory process, this activity should be kept to a minimum. Appropriate measures will be followed to account for parts issued and received during the inventory taking process.

IV. Attachements

Attachment A - Count sheet

Attachment B - Variance report
