1. Guardrail reflectors shall be installed at 30° intervals and placed in the upper portion of the guardrail post beginning with the first guardrail post. Type A reflectors shall be used unless specified otherwise on the plans.

3. See standard drawings G-00, "Standard Guardrail Hardware" for hardware details.

4. See standard drawing G-10, "Beam Guardrail Post Installation" for post lengths corresponding to different combinations of slope and behind-post embankment width.

5. Typical post spacing is 6-3/8" center to center.

6. This barrier is acceptable under NCHRP 350, TLS.
