GENERAL NOTES

1. Install recessed pavement markers spaced at 50' on tangent sections of roadway and on curves with a radius greater than 1,600'.

2. Install recessed pavement markers spaced at 40' on curves with a radius 1,600' or less.

3. Install recessed pavement markers between the lines on sections with double lines (either broken or solid). Increase the distance between yellow painted lines from the standard 3" up to a maximum of 5" to minimize paint overpaint onto the marker.

5. Install recessed pavement markers on the centerline of the lane, midpoint between stripe segments on sections with single broken lines.

6. Install reflectors of the same color as the pavement markings they supplement, except when red reflectors are specified on the departure side of markers on one-way roads to warn motorists they are going the wrong way.

7. Unless otherwise specified on one-way roads, reflectors are required only on the approaching traffic side of markers. In these cases, the 2'-6" taper may be omitted on the departure side.
