

Base from U.S. Geological Survey, Seward B7 and C7 (1951) Quadrangles, Alaska.

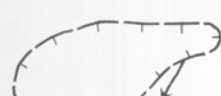

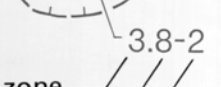

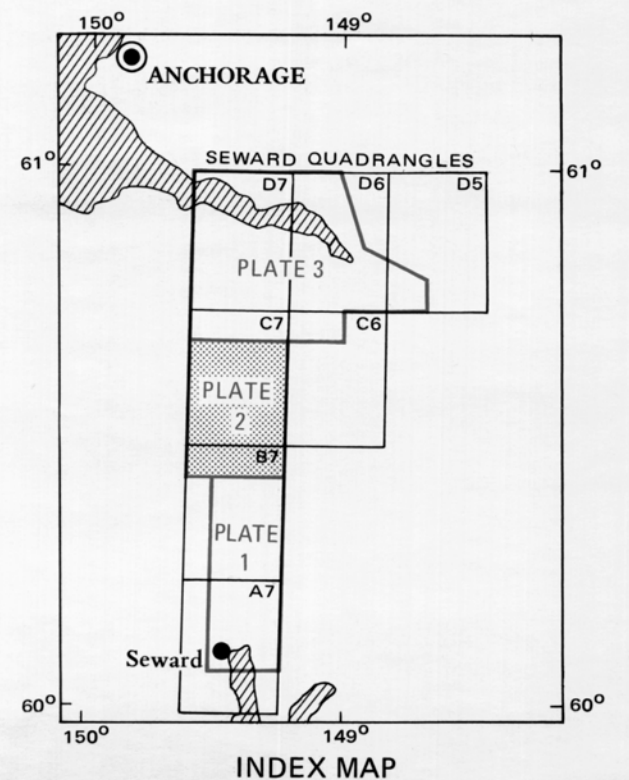

Avalanche mapping by G.D. March, assisted by L.G. Robertson, 1980-81; cartography by K.S. Pearson.

Magnetic declination (1951) is 26° East.

CONTOUR INTERVAL 100 FEET  
NATIONAL GEODETIC VERTICAL DATUM OF 1929

EXPLANATION

-  Approximate boundary of avalanche zone or path – Arrow indicates very narrow path.
-  Identification number – Where boundaries of adjacent paths are indistinct, identification number indicates approximate location of path within avalanche zone; region and zone numbers without marked boundaries indicate avalanche zones visible from but not known to affect highway.
-  Road mileage
